

7 Reasons We ONLY Use Gmail For All Our Email

Cheat Sheet

1. Send And Receive Emails From Your Business Domain's Email

- Gmail is an **online email management system** (it's not just a free email address)
- It handles *non-Gmail* addresses too e.g. send and receive email from your own domain's email address

2. Take Advantage Of Gmail's Advanced Spam Filter Technology

- Gmail's **superior spam filter technology** is in-built and **free**
- **Learns** as you tell it what is and is *not* spam
- **Saves you time** – no need to wade through unwanted spammy emails

3. Combine All Of Your 'Emails Logins' Into One Account

- **Use one login** (your gmail account) to access *all* of your email accounts
- **Save time** logging in and out of different email accounts

4. Gmail runs on and is backed up by Google's servers

- **Peace of mind** – your data is safely backed up. Google's Gmail servers are *very* rarely down.

5. Frees Up Space On Your Server

- **Free up precious web hosting space:** Gmail can store all of your domain's email on your Gmail account, instead of taking up room on your server
- **No risk of filling up your email quota** (never miss important emails)

6. Access To Free Google Drive

- **Your mobile office:** Google Docs, Google Spreadsheets, Google Calendar etc.

7. Gmail Integrates With Lots Of Useful Apps

- Boomerang for Gmail, IFTTT (If This Then That), Wisestamp, Insightly, Feedly, Hootsuite, etc. **See full list here.**
